A functional application created to target and log the performance of various school's harassment and bullying policies.

GET IT NOW

ABOUT OUR PROJECT

THE ISSUE

GLSEN is looking for a technical application to collect the harassment and bullying policies for every local education agency. With this data GLSEN can target which LEAs need to improve on their policies and be more inclusive of the LGBTQ+ community.

OUR MAGIC SOLUTION

Our application aims to filter through harassment and bullying policies, making a ranking of which schools have more inclusive policies. With this information GLSEN can help target which LEAs need improvement. The user will also be able to search by location or school to see how their local schools compare to others in the area. Users can push for their local schools the improve policies.

HOW IT WORKS

1

Parse through different LEA documentation

Our application aims to find similarities between ideal harassment and bullying policies and the ones we find on the Local Education Agency. This similarity data will create an index to rank schools.

2

Create Database to organize indicies

With the data on similarity and our new index, we can compare to other collected data points in order to create rankings and visualizations for the front end.

3

Display Visuals and information to user

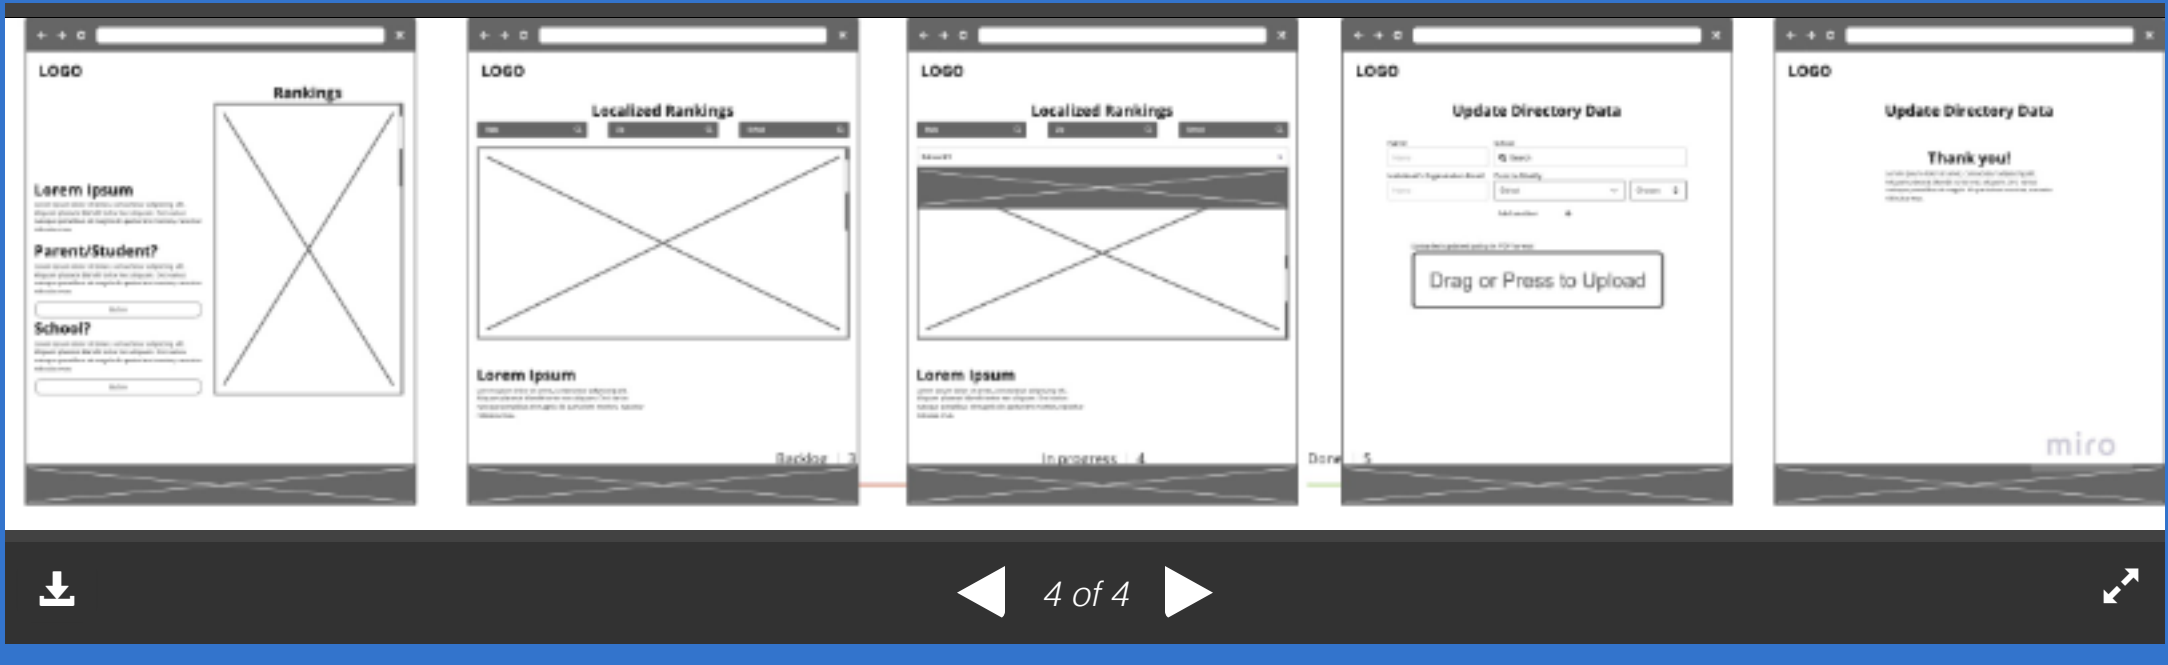

The app will target users (students, parents, and schools) to provide information of how LEAs compare with each other, and which need improvement. GLSEN will have access to the rankings and data too.
